

## PRO800D HI-POWER WIRE AND VALVE LOCATOR

### Unique Features Make Locating Easier

- 8 D Cell Transmitter Power
- Wireless Broadcast Cable Connection
- Triple AC Buzz/Noise Rejection
- 20% More Power
- Totally New Wand Design
- Null or Peak Reception Modes

## What makes the Pro800D unbeatable

Since 2005, Armada Technologies has brought out more new locator models than anyone else. Our newest is the Pro800D. Building on the innovative features introduced with the Pro800, the Pro800D adds the flexibility of using 8 D cell batteries for transmitter power.

In addition, we have kept the unique features offered by the original Pro800, including wireless inductive connection to cables, 20% more power, excellent wand noise rejection, and null/peak reception modes.

With added power and AC noise rejection, the standard locate becomes the clear, powerful locate. Go farther, go faster, and go clearer than ever before.

Wireless connection means inducing tracing signal all through the ground, allowing the user to trace any conductor in the ground within 25-30 feet of the transmitter. Once the cable picks up the signal, track it for up to hundreds of feet. When it dies, relocate your transmitter to the lost spot and start again. Voila, infinite distance capability!

## FEATURES

- Ergonomic, Light Wand Design
- Membrane Switch Technology
- Low Battery and Power LEDs
- Unlimited Tracking Distance in Wireless/Broadcast Mode
- Audio or Analog Meter Response Indicator
- Null or Peak Tracking

## SPECIFICATIONS

Power Requirements:	Transmitter uses 8 D Cell batteries / Receiver uses 1 9v square
Maximum Ranges:	Depth at 8 Feet, Distance is infinite with Wireless/Broadcast Mode
Frequencies:	Standard Mode @ 2Khz / Wireless Mode @ 185khz
Power Output Max:	900 v p-p
